EDUCATION

Thapar Institute of Engineering and Technology

Bachelor of Engineering in Computer Engineering | CGPA: 8.01/10 (till Sem VI)

Patiala, Punjab

Aug. 2023 – May 2027

Bhupindra International Public School

Senior Secondary (Class XII), CBSE | 92.8%

Patiala, Punjab

2023

EXPERIENCE

Intern, ELC Summer Program

Thapar Institute of Engineering and Technology

Patiala, Punjab

Jun. – Jul. 2025

- Engineered a prototype to capture real-time traffic data using IoT sensors and cameras.
- Applied SAC-based reinforcement learning for adaptive traffic signal control, improving throughput by 75% and doubling average vehicle speed in rush-hour simulations.
- Reduced average trip time by 30% versus fixed-timer baselines, validated across 4 SUMO traffic scenarios (light, medium, heavy, rush hour), with a web dashboard for live KPI monitoring.

PROJECTS

Mahoraga – Adaptive Combat RL Environment | Python, FastAPI, Docker, LoRA

Apr. 2026 · Finalist

- Built and containerized a FastAPI backend (`reset/step/model-status`) serving a 4-bit-quantized Qwen2.5-3B LoRA agent with a rule-based fallback; deployed to Hugging Face Spaces via a multi-stage Docker build.
- Fine-tuned Qwen2.5-3B via LoRA using an iterative reward-weighted SFT loop (Unsloth + TRL) with rejection sampling and expert-trajectory seeding across 5 training iterations.
- Developed a React dashboard and 33 unit tests covering environment mechanics and reward logic; team reached the national in-person finals of a 36-hour hackathon.

The Loop – College Event & Social Platform | FastAPI, React, PostgreSQL, WebSockets

Aug. – Dec. 2025

- Architected a campus event platform (FastAPI + React) spanning 8 relational models and 25+ REST endpoints, with JWT and Google OAuth authentication.
- Built a cosine-similarity recommendation engine that ranks events against a per-user weighted interest vector, updating weights dynamically as users engage.
- Engineered a WebSocket chat system with a server-side connection manager (multi-session presence broadcast) and client-side auto-reconnect with exponential backoff; deployed on Render.

Cosmic Bot – Community Discord Bot | Python, py-cord, PostgreSQL, Lavalink

2021 – Present

- Built and maintained a production Discord bot (py-cord, 6K+ LOC, 25 modular cogs, 70+ commands) serving a live community over 3 years.
- Engineered a Lavalink/wavelink music pipeline and migrated core database access from synchronous psycopg2 to async connection pooling (aiopg/asyncpg) to prevent event-loop blocking.
- Shipped DB-backed leveling with dynamically Pillow-rendered rank cards, moderation tooling, and a hot cog load/unload/reload admin interface.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, SQL, HTML/CSS

Frameworks & Libraries: FastAPI, React, py-cord, WebSockets, SQLAlchemy, Pydantic

Databases: PostgreSQL, SQLite

Developer Tools: Git, Docker, Google Cloud Platform (GCP), Hugging Face Spaces, Render

AI & ML: LLM fine-tuning (LoRA, Unsloth, TRL), LLM agents (Google ADK, Gemini), RL, Computer Vision
